Coronavirus Disease 2019
(COVID-19)
Daily Situation Report of the Robert Koch Institute

10/07/2020 - UPDATED STATUS FOR GERMANY

Confirmed cases	Deaths	Deaths (%)	Recovered
198,178	**9,054**	**4.6%**	**ca. 184,000******
(+395*)	(+6*)		

*Change from previous day; **Estimate*

COVID-19 cases are notified to the local public health department in the respective districts, in accordance with the German Protection against Infection Act (IfSG). The data are further transmitted through the respective federal state health authority to the Robert Koch Institute (RKI). This situation report presents the uniformly recorded nationwide data on laboratory-confirmed COVID-19 cases transmitted to RKI.

– Changes since the last report are marked blue in the text –

Summary (as of 10/07/2020 12:00 AM)

- The cumulative nationwide incidence over the past 7 days was 2.7 cases per 100,000 inhabitants. A total of 125 districts transmitted zero cases.
- In total, 198,178 laboratory-confirmed COVID-19 cases and 9,054 deaths due to COVID-19 have been electronically reported to the RKI in Germany.
- COVID-19 outbreaks continue to be reportedsporadically in nursing homes and hospitals as well as refugee facilities.
- Outbreaks of COVID-19 in meat processing plants have been reported in several federal states. In the district of Guetersloh in North Rhine-Westphalia, the former outbreak related high 7-day incidence has decreased to less than 30 cases per 100,000 inhabitants.

Note: The report is a snapshot and is continuously updated.

Epidemiological Situation in Germany
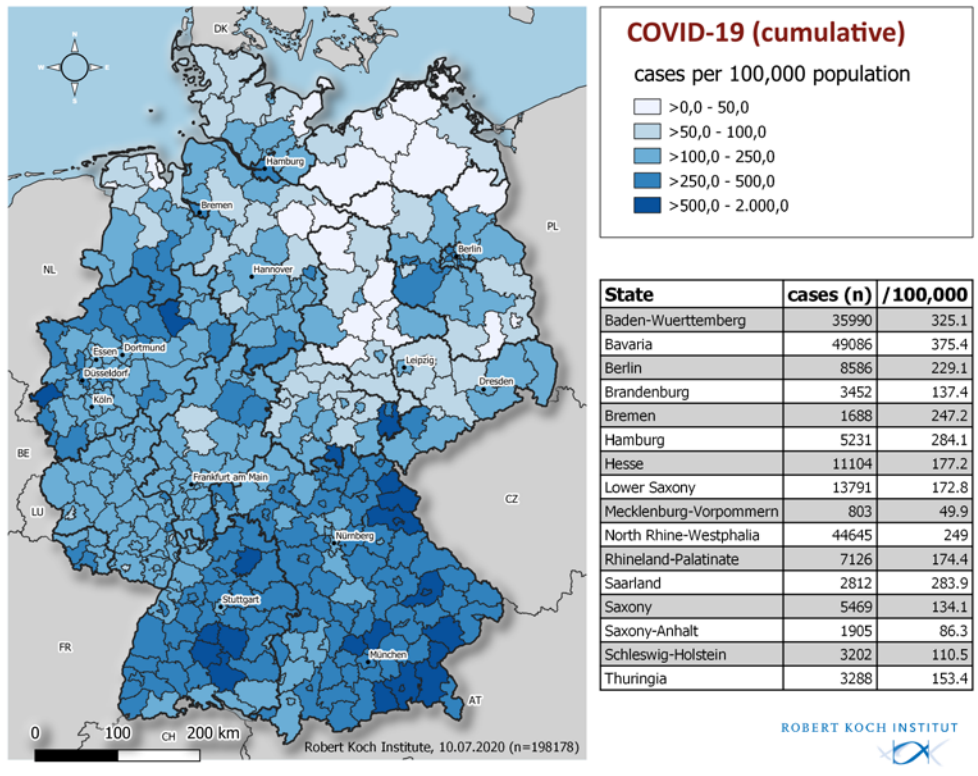

Geographical distribution of cases

Epidemiological analyses are based on validated cases notified electronically to the RKI in line with the Protection Against Infection Law (Data closure: 12:00 AM daily). Since January 2020, a total of 198,178 (+395) laboratory-confirmed cases of coronavirus disease 2019 (COVID-19) have been electronically reported to and validated by the RKI (see Table 1). A total of 125 districts reported no cases in the past 7 days. Information on laboratory-confirmed cases is also available on the RKI website at https://www.rki.de/DE/Content/InfAZ/N/Neuartiges_Coronavirus/Fallzahlen.html and https://corona.rki.de.

Table 1: Number and cumulative incidence (per 100,000 population) of laboratory-confirmed COVID-19 cases and deaths for each federal state electronically reported to RKI, Germany (10/07/2020, 12:00 AM). The number of new cases covers positive cases, which have been sent to the local health department at the same day, but also at previous days.

| Federal State	Total number of cases	Number of new cases	Cases/ 100,000 pop.	Cases in the last 7 days	7-day incidence per 100,000 pop.	Number of deaths	Number of deaths/ 100,000 pop.
Baden-Wuerttemberg	35,990	48	325	185	1.7	1,837	16.6
Bavaria	49,086	63	375	453	3.5	2,610	20.0
Berlin	8,586	49	229	205	5.5	216	5.8
Brandenburg*	3,452	-31	137	22	0.9	168	6.7

ROBERT KOCH INSTITUT

Figure 1: Number and cumulative incidence (per 100,000 population) of the 198,178 electronically reported COVID-19 cases in Germany by county and federal state (10/07/2020, 12:00 AM). Please see the COVID-19 dashboard (https://corona.rki.de/) for information on number of COVID-19 cases by county (local health authority).

Distribution of cases over time

The first COVID-19 cases in Germany were notified in January 2020. The incidence of COVID-19 decreased from reporting week 26 to 27 in the majority of states. In states with increases, overall incidences reamain low. Figure 2 shows COVID-19 cases transmitted to RKI according to date of illness onset from 01.03.2020 onwards. Of these cases, the onset of symptoms is unknown in 59,614 cases (30%), thus their date of reporting is provided in Figure 2.

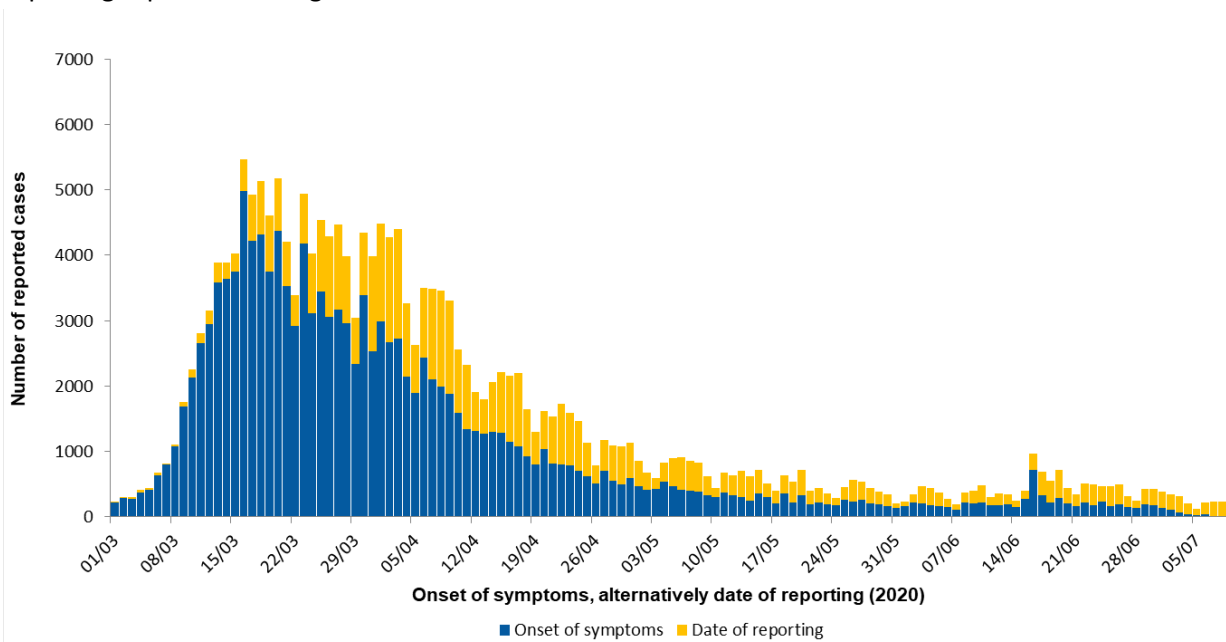

Figure 2: Number of COVID-19 cases in Germany electronically reported to the RKI by date of symptom onset or -if unknown- alternatively by date of reporting from 01/03/2020 (10/07/2020, 12:00 AM).

Note: The report is a snapshot and is continuously updated.

Demographic distribution of cases

Of all reported cases, 52% are female and 48% are male. Among all those notified cases, for which data on gender was reported, 5,197 were children under 10 years of age (2.6%), 9,726 children and teenagers aged 10 to 19 years (4.9%), 87,273 persons aged 20 to 49 years (44%), 59,815 persons aged 50 to 69 years (30%), 30,369 persons aged 70 to 89 years (15%) and 5,375 persons aged 90 years and older (2.7%). The age and/or gender is unknown in 423 notified cases. The mean age of cases is 48 years (median age 49 years). The highest incidences are seen in persons aged 90 years and older (Figure 3).
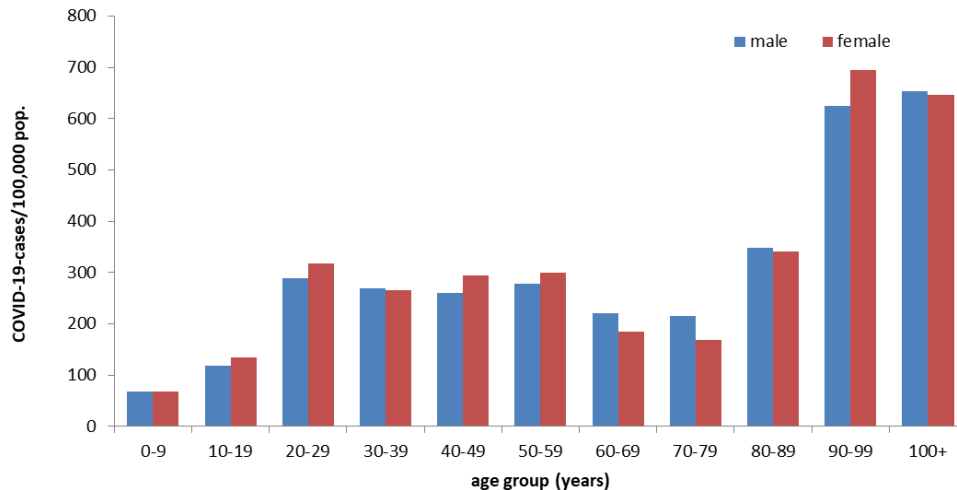

Figure 3: Electronically reported COVID-19 cases/100,000 population in Germany by age group and gender (n=197,749) for cases with information available (10/07/2020,12:00 AM).

Clinical aspects

Information on symptoms is available for 169,357 (85%) of the notified cases. Common symptoms are cough (48%), fever (41%) and rhinorrhoea (21%). Pneumonia was reported in 5,116 cases (3.0%). Since calendar week 17, cases are reported to the RKI as a distinct COVID-19 surveillance category. Since then, ageusia and anosmia can also be entered as symptoms. At least one of these two symptoms was reported in 3,851 of 25,926 cases (15%).

Hospitalisation was reported for 29,641 (17%) of 172,751 COVID-19 cases with information on hospitalisation status.

Approximately 184,000 people have recovered from their COVID-19 infection. Since the exact date of recovery is unknown in most cases, an algorithm was developed to estimate this number.

In total, 9,054 COVID-19-related deaths have been reported in Germany (4.6% of all confirmed cases). Of these, 5,003 (55%) are men and 4,046 (45%) are women (see Table 2), the gender was unknown in five cases). The median age was 82 years. Of all deaths, 7,750 (86%) were in people aged 70 years or older, but only 18% of all cases were in this age group. So far, three deaths among COVID-19 cases under 20 years of age have been reported to the RKI. Pre-existing medical conditions were reported for all three.

Table 2: Number of notified COVID-19 deaths by age group and gender electronically reported to RKI (Data available for 9,049 of notified deaths; 10/07/2020, 12:00 AM)

Gender	Age group (in years)										
	0-9	10-19	20-29	30-39	40-49	50-59	60-69	70-79	80-89	90-99	100+
Male	2	6	17	53	236	641	1,373	2,102	566	7	2
Female		3	6	22	85	230	667	1,904	1,084	44	
Total	2	9	23	75	321	871	2,040	4,006	1,650	51	2

Note: The report is a snapshot and is continuously updated.

Occupation, accommodation or care in facilities

In accordance with the Protection Against Infection Act, the RKI receives information on occupation, accommodation or care in a facility relevant for infection control for reported COVID-19 cases

Since information on occupation, accommodation or care in these facilities is missing in 25% of cases, the proportion of cases working, accommodated or cared for in these facilities reported here should be considered minimum values. Among the COVID-19 cases reported from the above mentioned facilities, the proportion of cases that actually acquired their infection in these facilities is unknown.

Table 3: Notified COVID-19-cases according to possible occupation, accommodation or care in facilities relevant for transmission of infectious diseases electronically reported to RKI (197,035* cases, no data available for 49,253 cases; 10/07/2020, 12:00 AM)

Facility according to		Total	Hospitalised	Deaths	Recovered (estimate)
§ 23 IfSG (e.g. hospitals, outpatient clinics and practices, dialysis clinics or outpatient nursing services)	Cared for / accommodated in facility	3,460	2,485	640	2,700
	Occupation in facility	13,987	638	20	13,900
§ 33 IfSG (e.g. day care facilities, kindergartens, facilities for after school care, schools or other educational facilities, children's homes, holiday camps)	Cared for / accommodated in facility*	3,490	73	1	3,200
	Occupation in facility	2,789	147	7	2,700
§ 36 IfSG (e.g. facilities for the care of older, disabled, or other persons in need of care, homeless shelters, community facilities for asylum-seekers, repatriates and refugees as well as other mass accommodation and prisons)	Cared for / accommodated in facility	18,151	4,107	3,574	14,300
	Occupation in facility	10,011	424	43	9,900
§ 42 IfSG (e.g. meat processing plants or kitchens in the catering trade, in inns, restaurants, canteens, cafés, or other establishments with or for communal catering)	Occupation in facility	4,686	196	5	4,400
Neither cared for, accommodated in nor working in a facility		91,208	16,052	3,452	85,900

*for care according to § 33 IfSG only cases under 18 years of age are taken into account, as other information may be assumed to be incorrect.
IfSG: Protection Against Infection Law

The number of COVID-19 cases was highest among persons cared for or employed in medical and other care facilites according to §23 and §36 IfSG (Table 3). The number of deaths was particularly high among persons cared for in these facilities. Among the cases reported as working in medical facilities, 73% were female and 27% male. Their median age was 41 years.

The high number of cases among people cared for or working in various care facilities (Section 36 IfSG) is consistent with numerous reported outbreaks, especially in nursing homes. The low number of cases among persons who attend or work in facilities providing child care or education (Section 33 IfSG) reflects the low incidence in children observed thus far. The increase in the number of cases among persons working in the food sector (§42) is largely due to outbreaks in meat processing plants.

Outbreaks

A high 7-day incidence with more than 25 cases per 100,000 inhabitants was observed in the district of Guetersloh (North Rhine-Westphalia).

The high but slowly decreasing 7-day incidence in this district is due to an outbreak in a meat processing plant. More than 1,500 employees were tested positive for SARS-CoV-2. The first employees were discharged from quarantine 14 days after being tested positive for SARS-CoV-2 and 48 hours after resolution of symptoms.

A few COVID-19 outbreaks continue to be reported in nursing homes and hospitals, refugee facilities as well as religious communities.

Estimation of the reproduction number (R)

The presented case numbers do not fully reflect the temporal progression of incident COVID-19-cases, since the time intervals between actual onset of illness and diagnosis, reporting, as well as data transmission to the RKI vary greatly. Therefore, a nowcasting approach is applied to model the true temporal progression of COVID-19 cases according to illness onset. Figure 44 shows the result of this analysis.

The reproduction number, R, is defined as the mean number of people infected by one infected person. R can only be estimated based on statistical analyses such as nowcasting and not directly extracted from the notification system.
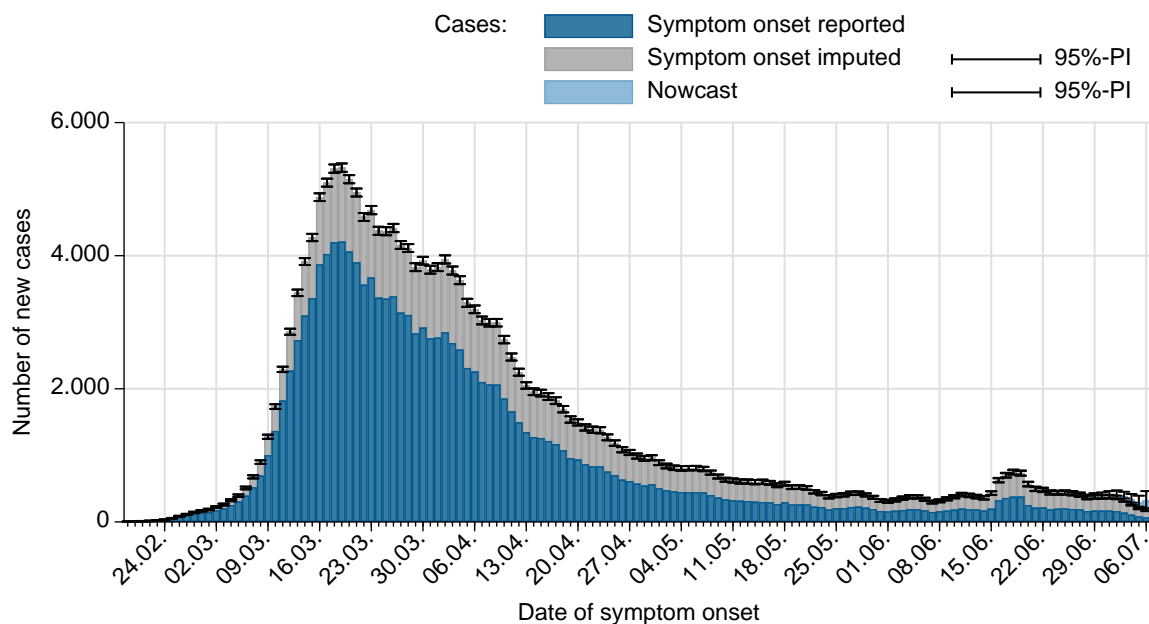

Figure 4: Number of notified COVID-19 cases with known date of illness onset (dark blue), estimated date of illness onset for cases without reported date of onset (grey) and estimated number of not yet notified cases according to illness onset electronically reported to RKI (light blue) (as of 10/07/2020, 12 AM, taking into account cases up to 06/07/2020).

A sensitive R-value can be estimated by using a 4-day moving average of the number of new cases estimated by nowcasting. This 4-day value reflects the infection situation about one to two weeks ago. This value reacts sensitively to short-term changes in case numbers, such as those caused by individual outbreaks. Furthermore, outbreak dynamics may be influenced widespread testing performed among possibly exposed persons, leading to therapid detection of large numbers of additional COVID-19 cases. This can lead to relatively large fluctuations in the estimated R-value, especially if – as is currently the case in Germany - the total number of new cases is small.

Note: The report is a snapshot and is continuously updated.

The current estimate of the 4-day R-value is 0.80 (95%-prediction interval: 0.65 – 0.99) and is based on electronically notified cases as of 10/07/2020, 12:00 AM.

Similarly, the 7-day R-value is estimated by using a moving 7-day average of the nowcasting curve. This compensates for fluctuations more effectively, as this value represents a slightly later course of infection of about one to a little over two weeks ago. The 7-day R-value is estimated at 0.90 (95% prediction interval: 0.80 – 1.00) and is based on electronically notified cases as of 10/07/2020, 12:00 AM.

Sample calculations as well as an excel sheet presenting both R-values with daily updates can be found under www.rki.de/covid-19-nowcasting. A detailed methodological explanation of the more stable 7day R-value is also available there. More general information and sample calculations for both R-values can also be found in our FAQs (http://www.rki.de/covid-19-faq).

A detailed description of the methodology is available at https://www.rki.de/DE/Content/Infekt/EpidBull/Archiv/2020/17/Art_02.html (Epid. Bull. 17 | 2020 from 23/04/2020)

DIVI intensive care register

A registry of the German Interdisciplinary Association for Intensive and Emergency Medicine (DIVI), the RKI and the German Hospital Federation (DKG) was established to document intensive care capacity as well as the number of COVID-19 cases treated in participating hospitals (https://www.intensivregister.de/#/intensivregister). The DIVI intensive care register documents the number of available intensive care beds in the reporting hospitals on a daily basis. Since 16/04/2020, all hospitals with intensive care beds are required to report.

As of 10/07/2020, a total of 1,270 hospitals or departments reported to the DIVI registry. Overall, 32,298 intensive care beds were registered, of which 21,208 (65%) are occupied, and 11,090 beds (35%) are currently available. The number of COVID-19 cases treated in participating hospitals is shown in Table 4.

Table 4: COVID-19 patients requiring intensive care (ICU) recorded in the DIVI register (10/07/2020, 12:15 AM).

	Number of patients	Percentage	Change to previous day*
Currently in ICU	278		+3
- of these: mechanically ventilated	132	47%	-1
Discharged from ICU	14,979		+56
- of these: deaths	3,739	25%	+10

*The interpretation of these numbers must take into account the slightly changing number of reporting hospitals (with large differences in their number of beds) from day to day. This can explain the observed decrease in the cumulative number of discharged

Note: The report is a snapshot and is continuously updated.

Mortality Monitoring

A total of 24 European countries provide the European EuroMOMO project (European monitoring of excess mortality for public health action) with official mortality statistics on a weekly basis which allows the detection and measuring of excess deaths related to e.g. seasonal influenza and pandemics (https://www.euromomo.eu/). In Germany, two regional systems that allow the transmission of data, have been established so far (since 2007 in Berlin and Hesse). The establishment of a nationwide monitoring system is planned from 2021 onwards.
All-cause mortality for the countries in the EuroMOMO network have now returned to normal levels, following a period of a substantial excess mortality coinciding with the COVID-19 pandemic. A few countries are still seeing some excess mortality. Excess mortality was observed primarily in the age group of over-65s, but also in the age group of 15-64s.

Weekly mortality statistics are also recorded on the website of the Federal Statistical Office, albeit with a certain time lag (currently 07/06/2020). A special evaluation on excess mortality is updated every two weeks: https://www.destatis.de/DE/Themen/Gesellschaft-Umwelt/Bevoelkerung/Sterbefaelle-Lebenserwartung/Tabellen/sonderauswertung-sterbefaelle.html (in German). Looking at the development by months, in March 2020 there is no noticeable increase in the number of deaths compared to March of the previous year. In April, however, the mortality figures were significantly above the average of previous years; since the beginning of May, the mortality figures have been back to around the average.

Risk Assessment by the RKI

General assessment

At the global and the national level, the situation is very dynamic and must be taken seriously. The number of newly reported cases is currently decreasing. The RKI currently assesses the risk to the health of the German population overall as **high** and as **very high** for risk groups. This assessment may change based on new insights.

Infection risk

The risk of infection depends heavily on the regional spread, living conditions and also on individual behaviour.

Disease severity

In most cases, the disease is mild. The probability of progression towards serious disease increases with increasing age and underlying illnesses.

Burden on health system

The burden on the health care system depends on the geographical distribution of cases, health care capacity and initiation of containment measures (isolation, quarantine, physical distancing etc.). The burden is currently low in many regions, but may be high in some locations.

Note: The report is a snapshot and is continuously updated.

Measures taken by Germany

- Corona-Warn-
  App https://www.rki.de/DE/Content/InfAZ/N/Neuartiges_Coronavirus/WarnApp/Warn_App.html
- Regulations for persons entering Germany in connection with the novel coronavirus SARS-CoV-2
  (15.06.2020) https://www.rki.de/DE/Content/InfAZ/N/Neuartiges_Coronavirus/Transport/BMG_Me
  rkblatt_Reisende_Tab.html
- Information on additional regulations at the regional level regarding control measures such as
  physical distancing or quarantine regulations for persons entering from other countries can be
  accessed here: https://www.bundesregierung.de/breg-de/themen/coronavirus/corona-
  bundeslaender-1745198 *(in German)*
- (Non-medical) face masks must be worn on public transport and in shops in all federal states.
- Data on current disease activity can be found in the daily situation reports and on the RKI
  dashboard:
  https://corona.rki.de/
- A distance of 1.5 metres to other indivduals must be maintained in public spaces:
  https://www.bundesregierung.de/breg-de/themen/coronavirus/besprechung-der-bundeskanzlerin-
  mit-den-regierungschefinnen-und-regierungschefs-der-laender-1733248 *(in German)*
